

# From The STAFF

THE "SLUMP" IS NEARLY OVER!...Need we remind you? Your VHF and UHF DX results may have been less than spectacular lately! What is often called the "DX doldrums" for TV and FM DX should soon be coming to an end--Spring arrives this month! In another month or so, daily conditions should be getting very interesting for VHF and UHF enthusiasts. In addition to the seasonal improvement in tropospheric DX levels, the equinox is approaching, and that means auroral DX becomes more likely. We are, or course, a year or so away from the sunspot peak, a time when outstanding auroral DX is often found. Northerly DXers are reminded to be alert for this somewhat exotic mode--and don't forget, high auroral activity often results in the spawning of unusual late night E-skip.

WTFDA 1989 GETTOGETHER TAKING SHAPE...Host Bill Kretschmer reports that next month's issue will detail plans for the 1989 WTFDA Convention on the August 4th - 6th weekend in Syracuse, NY. He stresses that because of a busy schedule, he needs to hear from those intending to attend the convention well in advance--so if you're planning on being at this year's convention, watch for your April VHF-UHF DIGEST!

COLUMN NEWS...EASTERN TV DX does not appear this month. Editor John Combs relates that only a small number of brief reports were on hand...Thanks to Ron Stock for taking over the long-delayed member roster project, which can be found in this issue...TECHNICAL TOPICS editor Tim McVey continues his classic series on DX propagation in this month's installment--don't miss it, especially if you are new to the DXing hobby!

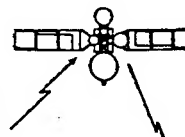

CATALOGS OF INTEREST...Dr. Bruce Elving has a new catalog out that no FM enthusiast should miss, featuring many items of interest to the DXer; if you don't already have one, send a SASE to him at Box 24, Adolph MN 55701-0024. Word has it that a new FM ATLAS edition is in the works!...TV DXers take note--Rich Wertman, 6150 Crosby Road, Lockport NY 14094 says he's putting together item and price sheets for items of interest, including Channel Master, Winegard, and Antennacraft antennas--many of which will be U.P.S. shippable. Anyone interested should send Rich an SASE and \$1.00. Rich is one of the few DXers selling antennas to fellow enthusiasts, and his prices have been very reasonable in the past.

## TABLE OF CONTENTS

SATELLITE NEWS: What happened to SelectTV???	3
TECHNICAL TOPICS: More on The Nature of DX; signal reflection modes.	4
TELEVISION NEWS: WBRE-28 tower goes down; KSWB-3 in Kansas on soon.	8
FCC FM NEWS: WMPG 90.9 ME is getting out better with 1000 watts.	15
SOUTHERN FM DX: Record summer for E-skip downunder; good MS in U.S.	28
NORTHERN FM DX: Reports of January aurora, plus some tropo.	22
NWS NEWS: Not a normal winter; Ebeling details Mpls/St. Paul NWS.	32

## SATELLITE NEWS

GEORGE W. JENSEN  
4604 Annapolis Avenue  
Baltimore, MD 21206-4220

A few items this month. The NBC feed on Satcom 1 - 139 W has been unscrambled from time to time due to problems with its K feeds. The entire Satellite went out (K-2) on Saturday, December 18 at 6:29 PM. It took until 6AM the next day to restore complete control over the bird. Many affiliates do not have any decoding equipment with the resulting drop of the encryption. From time to time they still have periods in the clear.

The VCII transmission on Satcom 1 XPDR 13V was 2 Channel which has now disappeared.

MTV West is now fully operational on Galaxy 3 no longer duplicating East.

Viewers Choice was merged with Home Premier I BELIEVE and this is where they are now?

From Orbit Magazine several items

A French newscast from TVI in France is carried in NTSC on Satcom 2 XPDR 20. I have noticed this live on Intelsat at 34 West on XPDR 23/24.

The Catholic Telecommunications Network of America (CTNA) is now on Satcom 4 - XPDR 2 along with their audio service.

Two new K Birds are scheduled to go into orbit later this year. They are Satcom K-3 and SBS-6. More details later as launch date approaches.

Some new audio services mentioned in Orbit are as follows:

WCCO - Minneapolis on G3 11 8.145

F3 1 5.94

G3 9 5.94/6.12

KTXQ - Dallas/Ft. Worth Spacenet 3 - 15 6.3

Ambassador Inspirational Radio - Spacenet 3 - 15 - 5.4/5.94

Tidewater Radio Network (religious) - Satcom 4 - 8 5.58/5.76

CTNA Radio - Satcom 4 2 6.2

Sun Radio Network - Spacenet 1 5 5.4

Other items:

Colorbars noted NTSC on PanAmSat 11H

Does anyone know what the flap is/was between SelectTV and Starion and Superstar Connection. Many subscribers to SelectTV received a letter from Superstar Connection stating that SelectTV would cease serving the TVRO Market and that the difference would be picked up by Starion all effective Midnight Pacific Time - January 31. SelectTV ran a disclaimer stating for people to call a non800 number for further information. I did and was told someone would get back to me = but I'm never home so I don't know if they did or didn't. Still don't know what the story is.

When launched in the future:

PanAmSat 8 57W

Atlantic 31W Ku

BSB 1

BSB 2 both Ku at 31 W

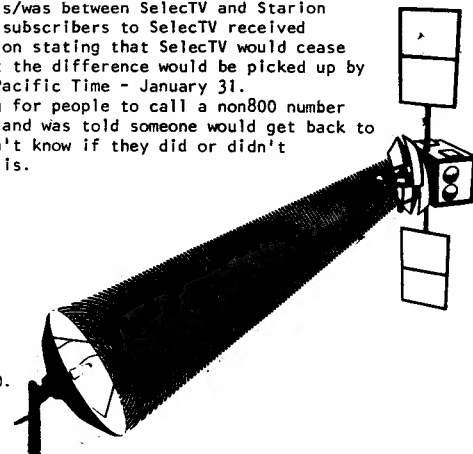

Olympus

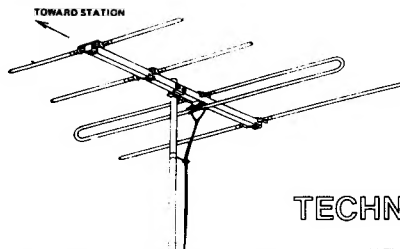

TV Sat 2

TDF 2 all 3 Ku at 19 W

Tele X - 5 E

That's all for now see you in 30.

## TECHNICAL TOPICS

### THE NATURE OF DX - PART IV: REFLECTION MODES

Sometimes it's amazing the secrets that nature keeps in spite of all our efforts and scientific progress. There still exist, at this time, no way to predict exactly where the next earthquake will occur, the winner of tomorrow's game, the sex of an unborn baby, etc. The behaviour of the ionosphere is a perfect example. In fact, I have deliberately put off writing this last article for over a year, thinking that somewhere I would come up with some book or person that would explain, completely, the phenomena of "sporadic E." That source hasn't turned up yet. Fortunately, 70 years of intensive research by many has led to very detailed documentation of the behaviour of the ionosphere. The highlights of all of this will be shared in this article, along with some theories about the formation of the ionosphere and its patches of ionization. We will cover, this month and next month, all of the "reflection" propagation modes for VHF/UHF: E-skip, F-2 skip, meteor scatter, and auroral.

### THE ATMOSPHERE

A good place to start is to look closely at the earth's atmosphere. As seen in Figure 1, there are four regions called the troposphere, stratosphere, mesosphere, and thermosphere. The boundaries of these are determined by temperature profile. In the troposphere, temperature (T) decreases with altitude (except for the localized anomalies that cause tropo DX—see parts II and III). Around 50,000 feet, sensors on rockets have measured that T begins to increase with altitude, and does so to a maximum at around 30 miles. This region, containing our protective ozone layer, is called the stratosphere. And in similar fashion, the mesosphere and thermosphere are defined.

Within those two regions, roughly 30 to 300 miles up, electrons and ionized particles interact in a neighborhood called the ionosphere. Nitrogen and oxygen molecules that find their way out of the lower atmosphere eventually reach the ionosphere, where they collide with ultraviolet radiation (UV) from the sun. The energy from that collision knocks electrons off of the molecules, leaving positively charged ions and free electrons. Each electron soon encounters another positive ion, to which it attaches, forming once again a molecule of nitrogen or oxygen. This process of atomic "musical chairs" is called recombination.

Now, while that electron is unattached, it can be excited by radio waves. If a free electron encounters energy from a radio wave, it will oscillate and re-radiate this energy. But it can only do so until it recombines. The time that elapses between the formation of an ion (the loss of an electron) to when that electron attaches to another ion is called recombination time. The recom. time depends on how far apart particles are from each other. The distance between particles depends on how many exist within a given volume of space, a quantity called density. Thus, the greater the (electron) density, the shorter the recombination time, and the higher frequency a radio wave must be to set electrons into motion and be reflected back to earth.

Back in the 1910's, when radio was being used to communicate with ships thousands of miles away from port, there was little understanding why it worked. Some followed the school of thought (of MacDonald) that propagation around the world was due to some sort of diffraction. But the mathematics used to support this were found (by Rayleigh) to be in error. Theories and observations in the early 1920's, however, rapidly converged to understanding. Kennelly (an American researcher) and Heaviside (his independent, English counterpart) suggested that a layer in the upper atmosphere must exist, at an elevation of about 50 miles, capable of reflecting radio waves. By 1925 Appleton had "discovered" the ionosphere: a layer of dense electron concentration at about 75 miles which he called the "E" layer (because E represents the Electric field of a radio wave). Shortly thereafter layers were found above and below E, and named F and D, respectively.

Chapman, in 1931, introduced a theory of layer formation that is more or less accepted to this day. It works like this: considering the process of recombination, we know that the concentration, or density, of air decreases with height. A reasonable gas concentration profile (density vs. altitude) is shown in Fig. 2. The sun provides a source of ionizing radiation from above the atmosphere. As that radiation penetrates closer to the earth, it encounters more air and produces more electrons, thereby losing more energy. (Note the UV energy profile in Fig. 2.) At some point, the rate at which ionizing energy decreases is matched by the rate at which gas intensity increases. It is at that point where maximum electron production occurs; at that height a layer forms.

Since the source of radiation is the sun, and since the earth moves relative to the sun, the intensity of radiation varies. Further, some electrons are always lost into space, while at the same time more air is circulated upward from winds in the lower atmosphere. Because of this, (1) the air in the ionosphere is never completely ionized, (2) the recombination process continually extracts energy from solar and cosmic radiation, preventing life as we know it from being cooked, and (3) the rate of production of electrons varies according to the position of the sun. To illustrate (3), Fig. 3 shows rates of production of electrons versus height. Curves A, B, and C correspond to these rates at locations:

- A - midday, directly above the equator;
- B - midday, overhead at some latitude north of equator, in midsummer;
- C - midday, overhead at that same location in midwinter.

If all such curves over all times and places are normalized, they seem to all reduce to the form shown in Fig. 3(b). This is called a Chapman layer.

Throughout the 1930's and 40's countless experiments were devised to observe the location of this layer. Since no rockets were available then, observations were limited to making special radio transmissions called ionospheric soundings. By measuring the time for a radio wave to travel upward from an antenna, to the ionosphere, and back to the antenna, along with the maximum usable frequency (MUF) supported by reflection, it was possible to produce an "ionogram" which precisely located the layer. Countless ionograms made all over the world found not only one layer, but at least four fluctuating layers.

### THE IONOSPHERIC LAYERS

The D layer is a broad region of ionization found at an altitude of 30 to 50 miles. D-layer ionization follows the intensity of the sun's radiation very closely; it peaks at noontime and disappears shortly after sunset. Further, because of the D layer's location in the lower part of the atmosphere, ionization levels are low, and recombination time is such that most radio energy is absorbed. The absorption rate decreases with increasing frequency, to the point that signals above 5 MHz are practically unaffected. (Exceptions to this occur when solar storms or man's nuclear explosions pump radiation into the D-layer and cause temporary blackouts—absorption at much higher frequencies—known as "sudden ionospheric disturbances," or SID's.) AM broadcast signals (0.54-1.6 MHz), for example, are absorbed by day (and more so in summer than in winter), but not at night, when they bounce off the E-layer and return to earth hundreds of miles away. (See Fig. 4)

The upper reaches of the D layer gradually blend into the lower extent of the E layer, loosely defined between 50 and 75 miles up. As would be expected, E-layer ionization is greater, and closely follows the position of the sun. During the night the density of the layer wanes as recombination takes place. During the day it becomes stronger, with maximum ionization around noontime. It has little effect on communications, except to contribute a little bit of absorption at low frequencies (less than 10 MHz). Within the E-layer, however, are mysterious currents and winds which give rise to short-lived patches of extremely high ionization capable of reflecting VHF signals—this condition is called "sporadic E."

The restless F layer rises and falls within an altitude of roughly 150 to 250 miles during the night. During daylight hours, the F layer separates into two distinct regions. F-1 extends from 90 to 150 miles up, and F-2 hovers around 200 miles in the summer, rising to 300 miles in the winter. (Fig. 5) Because the atmosphere is so rarefied at these altitudes, the recombination rate is low and the layer maintains a high electron concentration through the night. By day that concentration will more than double. It is the F layer which is responsible for the ability to carry on worldwide communications. Shortwave broadcasts and HF communications all over the world are routine below 15 MHz, with good conditions supported up past 30 MHz during times of high sunspot activity.

During the IGY in 1957, when study of and interest in the ionosphere was at an all time high, every nuance of the behaviour of the ion layers was observed and analyzed. Largely because of that intense research, ham radio operators and international broadcasters now have many books and charts which can be used to fairly accurately (at least as accurately as predicting tomorrow's weather) predict when and where HF propagation will be supported. For the more exotic VHF propagation by the ionosphere, however, research has failed to come up with much more than theory, even through the 70's and 80's. Today, the Chapman theory has held up somewhat, but there are many idiosyncracies of the F-2 layer that escape explanation. For instance, why are there often two maximum rate peaks on either side of noontime? Why does electron density vary through a normal 24-hour cycle in the polar regions during the winter, when the sun does not rise for weeks at a time? And when the sun is directly over the equator at midday on the day of equinox, the peak F layer concentrations are not found overhead, but at two distinct maxima both north and south of the equator.

### SUNSPOTS

Because the activities of the ionosphere are fueled by the sun, it is not surprising that radio conditions vary with time of day, seasons, geography, and solar variations. One interesting solar feature is the sunspot. For reasons still unknown, these dark areas form, and when they do they emit unusually large numbers of charged particles and UV radiation. When these things intercept the earth, the

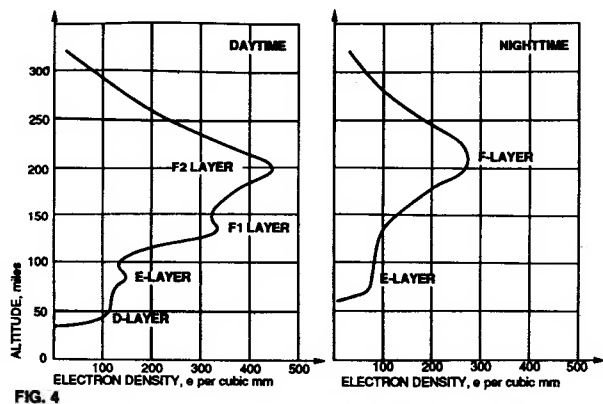

FIG. 4

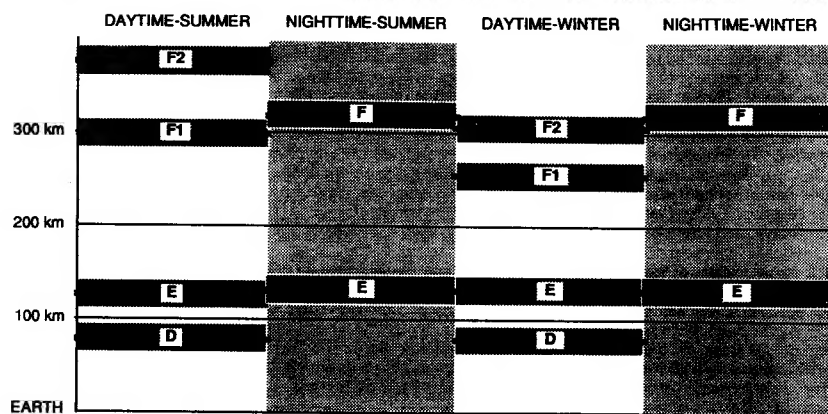

FIGURE 5

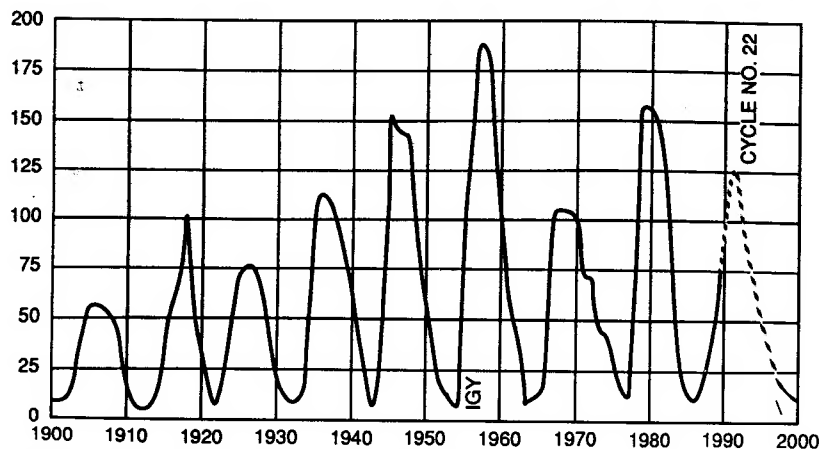

FIGURE 6 - SUNSPOT COUNT, yearly averages

ionosphere becomes quite disturbed. The particles often coincide with the appearance of aurorae. Sometimes a sufficient dose of UV will cause the MUF to fall suddenly, creating near total blackout of radio communications below 30 MHz. There have even been occurrences of MUF shooting to 100 MHz for a very short time before dropping to blackout conditions.

Sunspots, for all their mysteries, do have one very predictable form of behaviour: their numbers rise and fall on a regular, 11-year cycle. Cycle number 22 is due to reach a peak in 1991, as shown in Fig. 6. Already in 1988 worldwide observations have seen the MUF's steadily climb, and F-2 supported VHF reflection has occurred as a result of increased sunspot activity.

UV radiation travels from the sun at 186,000 miles per second, completing the trip to earth in about 8 minutes. Particle emissions travel slower, and may not cause noticeable effects on propagation for at least a day. Most of the time, the earth intercepts only a small portion of the stream spewed from a sunspot, resulting in increased electron density in the F layer(s), and an increased MUF that lasts for several hours or days. And since the sun completes one rotation every 27 days, there is often a certain periodicity to sunspot-induced events. Observations by radio amateurs have noted that while a sunspot may not always be visible, the area in which it was located may influence the ionosphere for as many as five solar rotations. It pays for DX'ers to keep records and look for repeat performances of DX openings based on this 27-day interval.

### SPORADIC-E

Now we have arrived at the most important part of the article for a VHF DX'er: the formation of "sporadic-E," or ES. As mentioned earlier, ES refers to patches of high ionization that exist within the E layer, typically around 60 miles high. These patches are often referred to as "clouds" because they are believed to form and behave very much like the clouds we are accustomed to seeing in the troposphere. They are usually less than 100 miles across, and seldom more than a few miles thick. Ionization reaches levels sometimes high enough to reflect TV signals and FM broadcasts to 110 MHz. The 6 and 10 meter amateur radio bands frequently buzz with long distance activity due to ES. But no doubt the reader is wondering how exactly this takes place. So is the author! Next month this article will look into this in detail, and finish up with a brief treatment of meteor and auroral reflections.

## ABBREVIATIONS USED IN THIS COLUMN:

AAT	Antenna height above average terrain
AG	Antenna height above ground
ASL	Antenna height above sea level
AZ	Azimuth (North=0°)
BT	Beam Tilt
CIR	Circular polarization
CP	Construction permit
CRTC	Canadian Radio-television and Telecommunications Commission
DA	Directional antenna
ERP	Effective Radiated Power
FCC	Federal Communications Commission (USA)
HOR	measured along a horizontal plane
MAX	In the direction or elevation of maximum signal strength
MP	Construction permit modification
TL	Transmitter or tower location
+	carrier frequency offset 10 KHz above standard
-	carrier frequency offset 10 KHz below standard
Z	carrier frequency not offset

It is interesting to note the effects of the current freeze on applications for new television stations in or near large cities. Below is 2½ months worth of research, and only a few channel assignments were applied for. Nearly all of them are for Las Vegas. There have been fewer grants, and even this number will gradually decrease. The pitiful number of consolidated hearings represents four months worth of Federal Registers.

There is one consolation, however. This freeze has also delayed FCC action on allowing land mobile services to share the UHF television spectrum. And if UHF is opened to HDTV, the increased demand for broadcast spectrum might prevent land mobile from taking over any of the UHF spectrum.

## APPLICATIONS FOR NEW TELEVISION STATIONS

## CHANGES GRANTED STATIONS ON THE AIR

AZ	Phoenix; KTSP-TV, ch. 10; granted license to cover CP for change: antenna raised about 109' to 1805' AAT/373' AG/3047' ASL.
CT	New Britain; WVTI, ch. 30; granted CP to reduce ERP from 3090 kw to 1435 kw max; reduce antenna height by 988' to 469' AAT/141' AG/866' ASL; same TL. Get it while you can.
FL	Fort Myers; WINK-TV, ch. 11; granted license to cover CP for change: antenna height increased 483' to 1478' AAT/1475' AG/1505' ASL; coordinates suggest same TL or close to it; BT CIR; look for some improvement to reception.
GA	Cochran; WDCO-TV, ch. 15 to change to ch. 29+; ERP to be raised from 501 kw max/363 kw hor to 5000 kw max; 1088' AAT/1078' AG/1458' ASL (conflicting figures: 61' lower AAT; 107' lower AG; 87' lower ASL); same TL; BT HOR; look for substantial increase in signal strength. Note change in channel assignment.
GA	Pelham; WABW-TV, ch. 14; granted MP to raise ERP from 501 kw max/363 kw hor to 5000 kw max; antenna height reduced 27' to 1240' AAT/1193' AG/1518' ASL; same TL; this replaces data reported in the 12/87 column; looks like substantial increase in coverage area.
GA	Valdosta; WVGA, ch. 44; granted CP to raise ERP from 1290 kw max/813 kw hor to 1365 kw max; 922' AAT/922' AG/1152' ASL; current height not available, except for 920' AAT, so probably not much change there if at all.

KY	Madisonville; WLCN, ch. 19; granted CP to raise ERP from 215 kw max to 2676 kw max; increase antenna height 492' higher ASL to 791' AAT/666' AG/1220' ASL; TL north side of Hopkins County Road No. 260, about 2.4 miles west of Hanson; coordinates 37°24'46"/87°31'32" (6 miles north of present TL). Looks like a big boost both in ERP and antenna height, making for better DX in IL, IN and MO.
NM	Albuquerque; KGSW-TV (ex-KGSW), ch. 14; granted license to cover CP for change: antenna height reduced 44' to 4181' AAT/145' AG/10769' ASL.
NY	Plattsburgh; WCFE-TV, ch. 57; granted license to cover CP for change: ERP raised from 762 kw max to 800 kw max; same TL; 2377' AAT/414' AG/3981' ASL (very conflicting with old data; 50' lower AAT; 32' lower AG; 115' lower ASL).
NC	Linville; WUNE-TV, ch. 17; granted license to cover CP for change: ERP changed from 1350 kw max/376 kw hor to 918 kw max; 1558' AAT/186' AG/4786' ASL (reduction in height of 79'); DA BT HOR.
TN	Lebanon; WJFB, ch. 66; granted CP to raise ERP from 100 kw max to 250 kw max; 528' AAT/259' AG/1148' ASL (previous amended permit called for 484' AAT, so probably little change in height, if any.; same TL).
TN	Memphis; WMKW-TV, ch. 30; granted CP to raise ERP from 2500 kw max/1009 kw hor to 5000 kw max.
TX	Fort Worth; KFWD, ch. 52; granted MP to raise ERP from 2619 kw max to 5000 kw max; same TL and height.
TX	Houston; KHOU-TV, ch. 11; granted MP (CP recently granted, but not reported in this column) to raise antenna height about 463' to 1870' AAT/1936' AG/2008' ASL; TL 0.5 mile north of Senior Road, near Mustang Bayou, 6.9 miles south of Houston City boundary; coordinates 29°33'40"/95°30'04" (0.3 mile north of present TL).

## CALL LETTER APPLICATIONS: NEW STATIONS

ST	CH	CALLS	CITY/APPLICANT
FL	64	WTNK	Destin; Emerald Coast Broadcasting
PR	60	WMEI	Arecibo; Hector Negrón Cartagena
WV	60	WEVW	Martinsburg; Ralph D. Albertazzie

## CALL LETTER GRANTS: NEW STATIONS

NC	36	WPCQ-TV	Charlotte; WPCQ

# NEW STATIONS ON THE AIR

- AR Pine Bluff; KVTN, ch. 25, went on the air 12/1/1988; 4368 kw max ERP; 596' AAT/594' AG/820' ASL; TL south side of State Route 161, 4.5 miles west of England; coordinates 34°31'52"/92°02'42"; independent station; address: Agepe Church Inc., 701 Napa Valley Drive, Little Rock AR 72211.
- CA Bakersfield; KDOB-TV, ch. 45, went on the air 12/1/1988; 5000 kw max ERP; 1325' AAT/144' AG/3665' ASL; TL Mt. Adelaide, approximately 15 miles ENE of Bakersfield; coordinates 35°26'20"/118°44'24"; independent station; address: KDOB-TV, Box 5276, Bakersfield CA 93388. Station was originally intended for ch. 48, but channel was changed by a recent MP.
- CO Denver; KTVD, ch. 20z, went on the air 12/1/1988; 3148 kw max ERP; 1256' AAT/241' AG/7927' ASL; TL approximately 13 miles ENE of Idledale, Jefferson County; coordinates 39°40'18"/105°13'12"; address: Twenver, Inc., 11203 E. Peakview Avenue, Englewood CO 80111.
- FL Clermont; WKCF, ch. 68z, seen testing by John Combs on 12/14/1988; 5000 kw max ERP; 1683' AAT/1662' AG/1716' ASL; TL 1.3 mile west of the intersection of highways 17, 92 and Miller Road, near Orange City; coordinates 28°55'16"/81°19'09"; independent station; current address not yet available.
- MI Mount Clemens; WADL, ch. 38, is scheduled to sign on in February, 1989.
- ND Jamestown; KNRR, ch. 7, went on the air 10/7/1988; 316 kw max ERP; 442.9' AAT/449.5' AG/1935.7' ASL (antenna heights from recent application, not yet granted); TL 2.5 miles WNW of Fort Seward Historic Site, Jamestown; coordinates 46°55'25"/98°46'20"; FBC affiliate, satellite of KVRN, ch. 15, Fargo ND; address: Red River Broadcasting Corporation, 4015 9th Avenue SW, Box 2801, Fargo ND 58108.
- TN Knoxville; WKXT-TV, ch. 8z, went on the air in early December, 1988; 316 kw max ERP; 1272' AAT/1034' AG/2292' ASL; TL 0.2 mile NE of Sharp's Ridge Memorial Park Road, Knoxville; coordinates 36°00'35.9"/83°55'56.5"; CBS affiliate; This station replaces WTVK, ch. 26, also owned by South Central Communications Corp., who turned in its license when WKXT-TV signed on.
- WI Milwaukee; WDJT-TV, ch. 58z, went on the air Nov., 1988; 2800 kw max ERP; 535' AAT/630' AG/1230' ASL; TL 505 E. Capitol Drive, Milwaukee; coordinates 43°05'15"/87°54'12"; independent station; address: TV 58 Ltd. Partnership, 509 W. Wisconsin Avenue, Milwaukee WI 53203.

# CHANGES IN THE TABLE OF CHANNEL ASSIGNMENTS

- FL Tallahassee: add 24z
- GA Cochran: delete #15z; add #29 (by request of Georgia Public Telecommunications Commission; WDCO to modify its license to specify ch. 29 instead of 15.)
- MN Minneapolis-St. Paul: change offset from 4z to 4+ (WCCO-TV was ordered by the FCC to

change its offset to accommodate new channel 4 assignment in Crandon WI).

NV Goldfield: delete 2-; add 7- (requested by KTVN, ch. 2, Reno, to allow it to relocate its transmitter from Red Peak to McClellan Peak).

WI Crandon: add 4z.

# CONSOLIDATED HEARINGS

- AL Tuskegee; ch. 22; Hefty Communications Ltd.; Tuskegee Television; Tuskegee Associates; Tuskegee Communications Inc.
- AZ Phoenix; ch. 61; Compass Rose Communications Corporation; Sun World Communications; Channel 61 Partners Ltd.; Maricopa Community Television Project; Brooks Broadcasting.
- CA Vallejo; KPST-TV, ch. 66; consolidated hearing between Pan Pacific Television Inc. (licensee), Stockholders of Pan Pacific Television (transferors of license), and Silver King Broadcasting of Northern California (transferrees).
- PR Yauco; ch. 42; Yauco Television Broadcasting; Maranatha Christian Network.

# FORUM

The mystery of that AVN channel 53 in the New Jersey area has come to an end. The Philadelphia edition of TV Guide includes this note in its channel listing: "WHSP, Ch. 65 in Vineland, and WWAC, Ch. 53 in Atlantic City, carry shop-at-home programs seven days a week." Also in South Jersey, WO8AC in Hammonton is now programming sports as it had promised, and identifies as WOAC.

And now for the mail, starting in the Northeast with BOB SEAMAN (Hazleton PA), who writes on WBRE, ch. 28 in Wilkes-Barre PA: "WBRE's tower was knocked down by high winds and a heavy ice storm on Sunday, January 8 '89 sometime before the station tried to sign on that morning. They were off the air for a few days. Apparently they are now broadcasting from a transmitter on top of their transmitter building with a reported power of 30 kilowatts. They were supposed to raise their power to 60 kilowatts and have a 200 foot tower installed by Super Bowl Sunday, but I never saw any improvement in their signal here, which is only about 18 miles from their transmitter site. Unconfirmed reports have stated that their new transmitter and tower will not be in place until sometime in the spring of '89." They are sending their signal to a number of cable companies via microwave."

HARRY HAYES (Wilkes-Barre PA) sent an article from the 1/9 *Wilkes-Barre Citizens' Voice* on the incident. A photograph of the tower's remains somewhat resembles a plate of spaghetti. Additional information is given in this article: "Several programming maneuvers were made in which WYOU, Channel 22, aired the game for its competitor station and Service Electric picked up the feed from KYM, the Philadelphia NBC affiliate, which carried the game." "Station officials said that this was the first time in its 35 years of broadcasting that WBRE had been off the air for an extended period of time. Even during the Agnes Flood of 1972 when the WBRE studios in downtown Wilkes-Barre received several feet of water, the station was able to microwave a signal

from Penobscot back to the station and air network and local programming."

TOM YINGLING (Dundalk MD) reports that LPTV station W42AJ in Washington DC is broadcasting Spanish programs, and is affiliated with Telemundo.

MIKE WIMER (Woodbridge VA) comments on his mistaken logging of WGGF-55 in Lebanon: "It was WGGF-55 (Riverhead) and not WGGF-55 (Lebanon). That logging was an error on my part and should have been a 'tentative'. (I wasn't aware that WGGF-55 wasn't on.) John Combs wrote in 'Lebanon,' in my report (Jan '89 VUD)." Mike also asks, "Any word on WVRN-63 (Richmond, VA)? I haven't seen them since around Sept. or Oct. 1988." All I know is that they went off the air. I don't know why, or when the station expects to come back on.

LARRY FUSS (Opelika AL) sent an article that explains the station change in Knoxville: From the 1/9 *Television/Radio Age*: "It ain't easy. But if you're in the rare right market and you're patient enough to wait around for seven years like the people at Tennessee Telecorp and South Central Communications did, maybe you, too, can turn your UHF station in for a V the way they did in Knoxville. The result is WKXT-TV, the CBS affiliate now on Channel 8, and conversion of Knoxville from a two VHF-two UHF market to one with three Vs and one U."

"Earl R. Taylor, WKXT sales manager and program director, explains that Knoxville is one of only four VHF drop-in markets the FCC authorized back in 1981, and the situation has been in litigation ever since, sorting things out from among 13 applicants for the then newly available Channel 8. One of the 13 applicants was South Central Communications, owner of WTVK-TV Channel 26, which had been Knoxville's CBS carrier. Another was Taylor's group, Tennessee Telecorp.

"After six years, Tennessee Telecorp finally got the nod, based on such FCC criteria as diversification (Tennessee owned no other TV, radio station or newspapers in the market), integration of ownership and management (Taylor and his colleagues are working full time for WKXT), a commitment to local broadcast news, and a letter of credit showing sufficient financial backing to operate the station.

"But even the initial decision by an administrative law judge awarding Channel 8 to Tennessee Telecorp wasn't the end of it—only the beginning of the end. South Central appealed. Then, says Taylor, almost two years was spent arranging a settlement. This involved the merger of Tennessee Telecorp with South Central and paying off the other remaining applicants 'to compensate them for out-of-pocket expenses' incurred in contesting the winning applicants.

"Finally in early December, Channel 8 hit the air, Channel 26 bowed out, and its license was turned back to the FCC for another round of grinding litigation concerned with regranting of the license. Now Taylor says, 'Our new Channel 8 signal will be second to none in our service area. Our new VHF signal, combined with 316,000 vertical watts and 316,000 horizontal watts of transmission power means more homes than ever before will get clear, sharp reception."

DAVID MOODY (West Portsmouth OH) (Remember that he works at WPBO-42, which shares facilities with WUXA-30) writes in a letter (somewhat edited and shortened) dated 1/18, "WUXA-TV 30 has stopped broadcasting as of January 2. The end began on December 29th. A man from central Florida came to the TV 42 and 30 complex at about 3 p.m. He told the people at TV30 he

had purchased the transmitter from MEYCOM INC. and was taking it back to Florida. At this time my boss ... informed the OHIO STATE UNIVERSITY of the situation, they told him not to let the transmitter out of the building. My boss told the man he could not take anything from the building. The man ... told my boss he was taking the transmitter with or without his permission.

"At this time my boss called the sheriff. The deputy sheriff arrived shortly and listened to each side of the argument. The deputy decided from the paper work to let the Florida man take the transmitter. My boss informed Ohio State of the outcome. They said they would turn the matter over to the lawyer. My boss told the channel 30 personnel that at the end of the day the door to their master control and transmitter would be padlocked and would not be reopened until further notice.

"At the end of the day my boss called and said not to padlock the room. Also two channel 30 employees stayed the night to insure we did not lock them out. On December 30 at midnight my boss and I were on duty. At this time the night operator at channel 30 went home for the night. My boss said nothing had changed and since the building was vacant of people, he was going to padlock all the doors with OSU padlocks.

"On the morning of December 31 ... WPBO engineer was informed by the University to let the WUXA personnel in. Things went fairly smooth for the next few days. Then at the end of January 2 the transmitter was shut down for the last time. The next morning the doors were padlocked.

"On January 4 ... the power to channel 30's TX room was shut off due to failure to pay its bill of about \$7000. Rent is owed to the University of about \$12,000. Several other merchants have come around and telephoned asking about payment of bills for WUXA.

"I talked to the master control operator for WUXA. He said the general manager is still looking for someone to buy WUXA."

On another subject, Dave writes, "On January 9 a new channel 21, Trinity Broadcasting Network, put on a low power television station, taking the feed from satellite." And lastly, "If anyone has any questions about AM, FM or TV broadcasting in Portsmouth, Ohio area feel free to write ... David Moody, 2909 Euclid Avenue, West Portsmouth, Ohio 45662."

First time reporter JAMES NAHIRNIK (Warren MI) reports, "Global Channel 22 Cottam Ont. is back on the air (I first noticed it here 1-11-89). Signal here in Warren, just north of the Detroit City limits, is much weaker than they were a few years ago when the Global stations first went on the air. Back then you could get a decent picture with a loop antenna on the back of the set.... In those days they would black out American programs on both 22-Cottam and 29-Oil Springs/Sarnia, since the Detroit stations had rights to the shows. They would run a simple visual message telling when they would be back on. 29-Oil Springs/Sarnia no longer does this, and it could be that the weak signal on 22-Cottam will allow them to avoid blackouts."

"I finally talked to someone ... about WADL-38 Mt. Clemens MI. They will begin broadcasting in February, and confirmed 5 million watts. He wouldn't be specific about programming. When I asked if they would be all home shopping, he didn't say no, but said there would be 'a mix of programs, a little of everything.' Oh boy! What do you think, home shopping plus an occasional

interview program and public domain movie?" (Do you have some reason for suspecting a shopping program? New stations don't often divulge their programming plans because they need a head start in bidding for them if they are to compete with already established stations.)

"Their transmitter and studios are located at 22590 Fifteen Mile Road, Clinton Township (mailing address is Mt. Clemens MI 48043) Phone 313-790-3838. That is 3 miles due south of downtown Mt. Clemens, about 18 miles ENE of the other Detroit TV stations (virtually nobody's TV antennas will be aimed correctly), and about 2 miles from Lake St. Clair and Canada."

**RON PURDUE** (Byron MN) updates the television situation in his area: "On March 1, 1989, the new Minnesota Independent TV network will go into operation. The flagship station will be KTMA-23 in Minneapolis (soon will get new call letters) along with KXLT-47 in Rochester, KXLI-41 in St. Cloud, MN, and along with Red River Broadcasting.

"KXLI and KXLT are currently off the air since Dec. 9th to prepare to join MIN. KXLI xmtv will be moved from Big Lake, MN to near Sauk Centre, MN and will return to the air by fall, 1989."

"The second item is about WLAX-TV channel 25 in LaCrosse, WI. On January 14, 1989, WLAX will become a new affiliate of the Fox network. I have seen the announcement today on the station. Still no sign of WEUX-48 in Chippewa Falls, WI since KXLT is temporary off the air."

Also in Wisconsin is **MICHAEL PARKS** (Amery WI), who gives a different picture of KXLI: "On December 14, KXLI announced that at the end of that broadcast day their operations would be suspended. It was so sudden that even the employees didn't know about it until they reported for work that day. KXLI's owner, L.E.O. Broadcasting, is merging with KTMA Acquisition Corp., which owns KTMA-23, Minneapolis, and the Red River Broadcast Corp., which owns KVRR-15, Fargo, its satellites and several LPTV's." Except for that fact that the stations are no longer owned by L.E.O. or Mr. Goins, but rather by Helcom Inc., there is very likely truth to the rest of his report. Going back to the article from John Ebeling last month, I now see that Wednesday, Dec. 14, the day KXLI shut down, was the same day the press conference announced the new network of independents.

"Apparently KVRR and its satellites are not going to be included in the network, only Red River's LPTV stations in Bemidji, Grand Rapids, Brainerd and St. James. I show Red River as owning K26AC, Bemidji, both K18AI and a CP for K14AM, Grand Rapids, and K54AT, Brainerd, but don't know what station they could be talking about in St. James." (Must be an LPTV, since there is no application for ch. 32; the application by Hubbard Broadcasting was dismissed by the FCC. Did they take over K42AV?) "They also propose leasing transmitters in Alexandria and Donnelly, building LPTV's in Austin and Park Rapids (where Red River already has a CP for K05IV) and moving KXLI's transmitter to Sauk Centre which requires moving to channel 19 to avoid short-spacing to KSAX-42. They want to move KXLI to Sauk Centre to eliminate the considerable overlap between KXLI and KTMA-TV's

coverage areas, but it seems to me that in changing to channel 19 they are asking for trouble as they'll be opening the door to competing applications." (That might be a risk, but runs of competing applications are usually the result of either creating a new channel assignment, or scrambling for the last available vacant channel in a city. Neither is the case here, since 41 will replace 19 as the vacant channel. Remember that this channel had been vacant for several decades.) K1986, a TBN station in St. Cloud whose existence is threatened by the change, will either have to apply for the channel themselves or change channels and, given TBN's aggressiveness, I don't see them just giving up and going dark." (I think TBN has reached its limit of full-service commercial broadcast stations, and will probably switch to another channel.) "I also wonder if they'll be able to provide city grade coverage to St. Cloud from Sauk Centre. They hope to have the two new LPTV's and KXLI's new facilities built and on line by this fall with KXLT and the other stations relaying KTMA-TV as soon as March 1st. They seem certain they'll get FCC approval for all this, but even if they don't, KXLI won't be back."

Other areas of comment by Michael: "After testing for four months, K13UT, Minneapolis, had their first official broadcast day on October 10 and an article about it in the Star Tribune had some 'facts' we DX'ers apparently didn't know: LPTV stations have signals as strong as full-power stations, but they don't travel as far, nor do they have call letters! Not only does K13UT indeed have call letters, but the last time I saw them they were actually using them. Their ID slide, which is usually shown at sporadic times rather than on the hour, also identifies four other Channel America affiliates that supposedly went on line the same day: K07TV, St. Louis, W14AE and W18AL, Syracuse, NY (two in the same city? W18AL is listed as 21.17 kW at 330' AG), and W55AT, Huntington, WV. Channel America is a new network designed primarily for LPTV stations whose programming consists mainly of vintage movies, quiz, game and fashion shows, and a very heavy diet of 30 and 60 minute commercials. About 130 more low-power stations are scheduled to begin carrying the network's 24-hour schedule by the end of June. The network claims to be highly responsive to viewers and solicits letters expressing suggestions for programming. Maybe we should all request a DX'ing quiz show."

"As if all the home shopping programs barging their way into your home through your TV weren't enough, local TV stations are now running an ad for the Telephone Value Network. You get to pay \$2 the first minute and 45 cents each additional minute for the privilege of listening to such rigmarole. I don't know how long they expect that to last. By the time you pay your phone bill, that \$300 gold necklace that you bought for \$100 is going to cost you \$600. What's next? NWS stations drop the weather in favor of the Rusty Antenna Value Network?" (Now that camcorders are within the grasp of households, I can see a revolution in yard sales. Picture a yard sale, with a television in the midst running a videotape recording of a home-made

"yard-sale club." About a year ago I ran a few ideas for TV marketing and asked for more suggestions, but none came. I think I suggested a gas pump channel at service stations, and a grocery channel at supermarkets.)

"Also I have further information concerning some of the items Ronald Purdue brought up in your December column. Regarding K1TN-29 applying to the FCC for a channel 27 translator in Rochester: Ron may have gotten that from one of those unreliable newspaper articles. There is already a CP for that channel in Rochester; K27BQ was granted to CRJ, Inc. of Golden Valley, MN at least a year ago so K1TV is probably trying to lease the station for use as a translator once it is built. If you think K1TN calling themselves 'Minnesota's Super Station' is dishonest advertising, try KMSP-9. Within a week of K1TN adopting the aforementioned slogan, KMSP-TV began adding 'The real superstation' to their promos and newspaper/TV Guide ads.

"Speaking of dishonest, for a station that plans to be Christian oriented, KVBM-45 is either deliberately trying to mislead the public or else they're very forgetful. They keep insisting they will be the Twin Cities' first full-power Christian TV station as if the actual first one, WFBT-29 (now K1TN) never existed. The original KVBM-TV CP showed an antenna site in downtown Minneapolis, but they apparently never intended to use it. After being denied the Shoreview towers as a site, they tried for Oakdale, a relatively rural city east of St. Paul which would have placed them closer to here than the Shoreview towers, but they were denied that too. In your November column, you show KVBM-TV applying for a change to 94.8 kW at 863' AAT so I wonder if they finally found a site. What coordinates did they apply for this time? The 772.5' Northwest Center was just completed so maybe they're back to downtown Minneapolis." (The application called for the IDS Building, 44°58'34"/93°16'20". It's common practice for applicants to submit an application with temporary data, knowing that they have additional time to amend their applications before the FCC makes a decision on it.)

Also in November, you show WEUX-48, Chippewa Falls, WI, applying for a change to 398 kW at 1076' AAT. What coordinates is the new tower site at? I suspect they plan to build it closer to WQOW-18 or WHWC-28's site." (The proposed coordinates, 44°57'34"/91°40'02", put it within a few hundred feet of WQOW-18, about 15 miles west of Chippewa Falls, between Colfax and Albertville.) "Again I don't think they ever intended to build it where the original CP indicated. Family Group Limited, the grantee, seems to be pretty good at getting their CP's on the air, so chances are good that WEUX will be also.

"I agree with Ron concerning an independent station in Duluth. The only full-power CP left is KRBR-21 and it's beginning to look like they aren't going to make it as their CP is almost two years old and, as far as I know, they haven't even started construction. I also know of no one applying for channel 38 in Walker, MN. As for WVCX-43 in Tomah, WI, wasn't that CP cancelled quite some time ago? I can no longer

find any official references to it." (I have no record yet of it being cancelled. Around 1983 the permit was taken over by Wisconsin Voice of Christian Youth, which operates WSC0-14 in Suring WI and WVCY-30 in Milwaukee. So evidently the station was given an extension.)

Still in Wisconsin, we come to **NATHANIEL ELY** (Madison WI), who sent in an article on LPTV station W05BD from the 1/5 *Wisconsin State Journal*. "Madison's newest television station, W5BD/Ch.5 (sic), went off the air this week after a disgruntled co-owner showed up, took his satellite dishes and went home. The station shut down Tuesday when Warren Cave, the station's co-owner from Sarasota, Fla., arrived in Madison to remove his equipment which included the two satellite dishes that transmitted the broadcasts, said Steve Olson, the station's manager. (I wonder if this is the same guy that took the WUXA-30 transmitter! -wbf) Olson said Cave took the equipment when negotiations between him and the station's other owner, Dan Dobrowolski, broke down. Olson said Dobrowolski planned to purchase the station from Cave. 'The station is inoperable without the equipment,' Olson said. "When Warren said he would take the equipment, Dobrowolski made the decision to start Channel 54," Olson said. The new station, WSSM/Ch.54 will go on the air sometime in February, Olson said. 'Right now, there is no Channel 5,' Olson said. 'There is a license to operate the station, but not enough equipment.' Ch. 5 began broadcasting in December, 1987. A low-power station, W5BD broadcast within a 20-mile radius of its station and transmitting tower at 6115 Odana Road, and on cable Ch. 25. Marilyn Friday, the station's program director, said much of the programming on Dobrowolski's new station, Ch.54, will be the same. The station plans to switch its current schedule, heavy on sports and movies, to Ch. 54. This changeover had earlier been described by management as part of a planned maintenance program which put the station off the air. The loss of equipment will not affect programming on the new Ch. 54, Friday said." Nate comments, "Why does Mr. Dobrowolski think he can get on the air this easily (or is the FCC so deregulated that they just pass out construction permits on request?) (There is no channel 54 assignment, and I never heard of WSSM. Could he be talking about a cable channel? -wbf)

**RON WING** (Wichita KS) sent in a clipping from the 1/3 *Leoti Standard*. This is actually a letter to the editor from the chief engineer of KSWs, ch. 3, Lakin KS. It's an update on the construction of KSWs. "Time for an update on the Public Television for Southwest Kansas project. Since the last newsletter in October, the microwave equipment has all been installed; however an interference problem was discovered at the Belpre site where we begin to diplex with the existing KTVC (ch. 6, Ensign KS -wbf) microwave system. Our transmitter was interfering with their receiver, so we had to send our units back for retuning by Harris Corp." "We have noticed some other intermittent interference showing up at the Lakin site, but to date have been unable to find the source."

"Tower construction at the Lakin site was completed in October 30th." "The transmitter

equipment is approximately 60% installed." "As soon as we get everyone back after the holidays, transmitter installation will resume. I estimate three weeks of work. Proof of Performance to take another one to two weeks. After that, the next major installation will be the remote control system, estimating three weeks for its installation." "As you may have noticed, this schedule puts us past the original February 1 date. With the remaining work in mind, I am now estimating a March 15th date of probable On-The-Air. Again, this is such dependent on the weather and somewhat to shipping schedules of the microwave units being returned."

Out to the west coast with JIM PIZZI (Paso Robles CA), who sent in a few newspaper articles. From the 12/31/88 *Telegram-Tribune*: "San Luis Obispo County will lose its only Spanish-language TV station January 20. Riklis Broadcasting, whose holdings include television stations nationwide, has agreed to pay 'in excess of \$1 million' to Sainte Limited for KOUF Channel 9 in San Luis Obispo and KOTA Channel 7 in Santa Maria, said John Huddy, president of Riklis Broadcasting. Among other things, the deal means that Spanish-language station KOTA will be replaced with English-language programming broadcast by Riklis' Oxnard television station, KADY, Huddy said." "KOUF and KOTA's programming is scheduled to be replaced Jan. 20 by programming from KADY-TV, Huddy said. The new programming from KADY will include regional sports, public affairs, entertainment and national and local news. Huddy said the two stations will broadcast KADY's programming from 7 a.m. to 2 a.m. seven days a week."

The 1/6 *News-Press* reports on more stations that will carry KADY: "Santa Maria's Spanish-language television station, K07TA, is going to become part of the Central Coast's first independent 'super station' and drop most Spanish programming, station officials said Thursday. The station - on the air as Channel 7 in Santa Maria since Oct. 1, 1986 - is being sold by Sainte Ltd. in Modesto to Riklis Broadcasting in Beverly Hills for more than \$1 million, said John Huddy, president of KADY, a Riklis-owned independent station in Oxnard. K07TA and its unmanned transmitter station in Morro Bay, K09UF, will air the same programs that KADY transmits, and hopes to make the change on Jan. 20, Huddy said."

The 12/18/88 *Los Angeles Times* gives a review of the growth of Trinity Broadcasting Network: "When Phil and Jan Crouch started Trinity Broadcasting in Santa Ana in 1973, they had no idea that the then-tiny Christian network would someday stretch nationwide. But in the intervening 15 years it has done that and more. Today it is an international network, with stations in South Africa, the Caribbean, Europe and Central America."

"About two years ago we bought Johnny Carson's station in Albuquerque, Channel 23," Paul Crouch said. "I had never really known what the audience of Trinity was because we don't subscribe to Nielsen or Arbitron or any of the ratings services. We don't sell commercial time, so we don't really need to know what our audience is, but Carson had the whole library of

television ratings-wbf) over there, so I looked us up. I was shocked. It showed me that 20 million Americans watch at least one hour of Trinity Broadcasting Network a week. I knew we had a pretty good audience out there but I had no idea it was that size."

"TBN has 140 stations in the United States and 10 in foreign countries. With an additional 8% million cable subscribers in the United States, TBN has access to 'about 70% of U.S. households,' he added."

"Trinity produces about 85% of its programming. The other 15% is produced by various ministries and Christian organizations on a cost-sharing basis. All programming is supported by gifts, or donations, from viewers."

"What has Crouch most excited, however, is 'the way the foreign stations have opened up.' The first was on the Caribbean island of Nevis-St. Christopher. (A 10-million watt station. Crouch calls it 'the most powerful in the Western Hemisphere.') The 'big breakthrough' came in the Ciskei homeland of South Africa in 1986, Crouch said. Although Ciskei is considered by some to be a sovereign nation, the Republic of South Africa controls its airwaves. Despite its skepticism, the Republic of South Africa did issue a permit to build a 1-million watt station in Ciskei. Recently, South African President P.W. Botha authorized the South African Broadcasting Company to establish a complete Christian network where TBN will have an allotted portion of time, Crouch said."

"In June, TBN began a 15-minute-a-week broadcast on the single network in the People's Republic of China, where the signal reaches an estimated 600 million viewers."

Lastly is our only Canadian contributor for this month, J.J. ROSENBERG (Richmond Hill, Ont.) "I have recently QSL'd CKNV-2, Manitoba providing info which differs from the TV Data Base. The letterhead states 'CKND-2/Westman'. The ERP is 100 kw & EHAAT 1300 ft. The transmitter is located 30 mi north of Brandon which puts it in the Minnedosa-Basswood area. The term 'Westman' must refer to Western Manitoba because an atlas shows no town of such name."

"I have also obtained a master list of stations from TVOntario including the mystery spotted by Dave Nieman (VUD Jan/89). Here are the newer repeaters on air:

LOCATION	CH	ERP	AIR DATE
Tobermory	49	50 watts	June 21/88
McArthur Mills	42	63.76 kw	Oct. 14/88
Cloyne	55	57.18 kw	Oct. 31/88
"McArthur Mills is 18 mi. east of Bancroft. Cloyne is 45 mi. SE of Bancroft, 55 mi. N of Deseronto"			
NEW STATION TARGET DATES:			
Hawkesbury	48	6.65 kw	Mar. 1/89
Kenora	44	58.21 kw	summer/89
La Chaine Francs (TV0 French)			
Hawkesbury	39	6.65 kw	Mar. 1/89
Sudbury	25	164.4 kw	spring/89

"There are 188 TVOntario LPRT's with xmr of 5-20 watts in Northern Ont., maintained by TV0 crews working out of Sudbury or Thunder Bay. Approx. 30 are on Indian reservations."

"Some ERP's on the TV0 master list differ from the 'Data Base' e.g. Ottawa - 879 kw."

"Question: If ch.26 Jamestown came on air in Sept, why haven't any of the Buffalo boys reported it?"

# FM NEWS

## Readers' Reports-A VUD Exclusive!

An OR would-be DXer says "thank you for the latest FM Atlas. See the enclosed 'Oregonian' article. KYTE had a short AM-FM simulcast, then it came on 101.1 'Portland's Own The City FM', with mor vocal-jazzy music (my effort to name it), with call changed to KKCY. The classical has usurped AM 970, KYTE. "I like classical and I do not like the reduced reception and fidelity of AM. Other news: KUHT-TV channel 32 is about to commence test pattern and programming (Family-Christian), 5 megawatts ERP, Salem and Portland coverage, Salem studios."

"WOKC-FM 103.1 Okeechobee FL is no longer monophonic-they are now in stereo. The new WCWB 101.7 Trenton NJ is k, and stereo. The latest ratings were released. WLYF #1 in Miami and WEAT #1 in West Palm Beach. I don't know if you saw it but NBC Today Show weatherman Willard Scott was broadcasting from West Palm Beach when he was plowed over by two guys trying to win \$1,000 in a contest on 95.5 WOYV. The object: show a sticker on national TV."

European member but frequent traveler to the U.S. Dr. Ulrich Onken, presented several corrections to the "FM Atlas," most of which had been reported on in earlier months. "In your column in the VUD you printed my comments on the FM performance of two Sony portables, the ICF-2002 and the ICF-2010. I have modified both receivers in order to improve their selectivity on FM. I replaced the two ceramic filters in the FM-IF section with the type SFE 10.7 MS3 with a specified bandwidth of 180 kHz. For comparison, the original filters used by Sony (SFE 10.7 MA) have a bandwidth of 280 kHz."

"I also tried the narrow-selectivity type SFE 10.7 MJ, but audio quality suffered too much with this filter. Unless somebody wants to use his Sony set for SCA services, I can definitely recommend the modification. Adjacent channel selectivity is much better than with the original filters and signals on alternate channels do not affect reception at all. Anyone who wants to try the modification should have some experience in soldering, especially when working on the ICF-2002. The filters mentioned are manufactured by Murata, Inc., and may be obtained through shortwave radio outlets. The modification does not improve the selectivity of the Sony portables to cope with strong signals; both sets' performance is suffering from overloading by local stations. This problem appears to be much less severe in Germany, because FM transmitter sites are usually located outside the major population centers and thus do not cause trouble."

Bill Dulmage, who works at CFMX and CFMX-1 in Canada says: "Received your new catalog last week. A lot of interesting stuff! You may receive some orders from me later in the year. CFMX is applying for a power increase in Mississauga, as our signal there is not great. I don't think we've officially applied yet. With the Cobourg tower, we now have our antennas up—we're just awaiting final approval before we switch to the new tower. In other FM news: I have finally heard WFRW 88.1 Webster NY. I have heard a WMHR station (Mars Hill Network) on 90.3 obviously in the Rochester-Buffalo area—do you know the calls and location?" [Most likely it's WJSL Houghton NY-b.e.] "Thirteen-ninety appears to be occupied in Syracuse again. I don't time simulcasting with 'Kix-FM', WKFM in Fulton NY. I don't know if they're officially on or just testing. I heard them yesterday, but not today," and the signal isn't as strong as when WFLB held the frequency."

Paul Gaines sent a Detroit Free Press radio column, in which a writer speculates if WJ01 97.1 dumps its b format, then CKMR 93.9 Windsor should pick it up. "It would be easy to sell them to advertisers, along with big band sister station, CKLW AM." Here's Kelly Miner, 17, news director and disc jockey on WSHJ (FM) Southfield MI high school's station at 88.3.

WEVD on FM is now history, as it's been displaced by WSKQ-FM. Bill Nienajady heard the last of WEVD FM, having moved to 1050 AM. "Scott Shannon's last time on Z-100 NYC is today, Friday 1-27-89." He goes to Los Angeles, causing BILL to wonder if Z-100's ratings will go down now? Brian Wilson will join the Z-100 morning show after Shannon leaves. Wilson used to be a part of the Ross (Ross Billian) and Wilson crew on WABC nine years ago. "WCWP '88.1 Brooklyn NY slogan 'Long Island's only talk radio station'. Good DXing! WPLJ 95.5 has a

Bruce F. Elving, Ph.D., Editor  
241 Anderson Road  
Esko MN 55733-9413

Contributions welcome!

special phone # to call for listener suggestions "for a better radio station. WNEW-FM 102.7 sound quality excellent! Better than WXXR, which has an uneven sound quality. Best sound quality for pirate radio is KPRC 91.5 (Brooklyn, I think). Signal weak... WEBC ('The Hits of a whole generation, Wee Bee 108 FM') 107.9 CT was off for quite a while, mentioning later

Kelly Miner, 17, on WSHJ

transmitter and antenna problems. Picked up some decent DX while they were off. WHUD 100.7 Peekskill and WCBF-FM 101.1 New York city both use Ed Baer as a d-j. This is the only place where I have ever heard two stations near each other on the dial in roughly the same area to use the same d-/announcer! But Ed Baer's mainstay is WHUD. WHUD, of course, is 'B.' Bill suggested I use both km and miles in the next edition FM Atlas. I cannot do that because space is at a premium, and I am committed to the metric system, and do not encourage readers to convert. Just use the data as given, and there will be no confusion! He also sent several revised program format codes, some of which would take up to three characters to list (e.g., MOD=modern/new wave, XVR=crossover, VAR=variety, URB=urban contemporary, etc.). I still like the present way, which permits the use of only one letter or as many as two letters to describe a station with two different formats, or one that may have a hybrid, incorporating elements of two main formats. Howard Stern is on local radio five days a week not four, as I said in the January column. "WMSC 101.5 Montclair (not 'Upper Montclair', or has 'Upper Montclair' become part of Montclair? My newest NJ road atlas no longer shows an 'Upper Montclair'-b.e.) still leaves its carrier on even for days at a time when they are not broadcasting!"

Bill then goes on to propose a way to save AM ("antique modulation"). "Get rid of AM the way it is totally. One only stereo system! My proposed changes: Class 1) 10,000 watts 540-900 kHz; Class 2) 5000 watts 910-1200 kHz; Class 3) 2500 watts 1210-1400 kHz; Class 4) 1000 watts 1410-1800 kHz," with certain distance separations specified. "No directional antennas, 24 hour operations, no lower night power. Translators only allowed up to 50 watts 1410-1800 kHz. Relaxed programming requirements for 1000-watters, 2500 watts permitted to rebroadcast FM out of market area; 5000 watters and 10,000 watters for larger cities. By dividing up frequencies with powers, everything should be more orderly. All stations will be staggered and allocated like FM is, so wherever you travel, even at night, things should sound much better. Sixteen hundred to 1800 kHz should be reserved for noncommercial broadcasting college band. What do you think?" [It won't work—too radical, unless a plan like this is allowed to come about after almost the last AM station has been deleted.]

"May I assume no one IDED Barry Goldwater's picture as the 'mystery' DXer-ham?" writes Gus Mancuso. "DX radio program on 1-7-89 turned out to be mostly a shortwave discussion—is anyone surprised? Host said show is biannual, not yearly. Hope time for summer show is listed. How come you published details of Phila. (I guess-can't read the writing here) oldies war last year, but not Baltimore information submitted by me?"

Alain Pepin "finally computerized and cross-indexed my cassettes by state, province and country. I have 386 stations on tape (many recorded several times) from New York state alone, 199 for Michigan (just examples)." The information has been

# FCC-FM

## Ohio's WBVR Expands into Fort Wayne market

March, 1989

abstracted below in various places, mostly under formats and nonIDs. I would like him, or anybody else, to tell me if WSSV 101.3 Stillwater NY is stereo or not. And he says WKOL 97.7 Amsterdam now IDs with Albany, which I find hard to believe—an extreme rim-shooter! I wonder how well it comes in in Albany? B formats (beautiful music) seem to exist on WYRY 104.9 Hinsdale NH and WHGC 94.3 Bennington VT, which surprised me. Alain says "I will have an article in the April DX Messenger: a comparative test of headphones under water. Impractical I guess for WTFDA, since VHF disappears altogether one meter from the surface! See, there's an advantage of AM you might not have considered! Hi!"

Wendell Ford was one of the first to hear Fort Wayne's "new" station, WBVR 98.9 (Van Wert OH), "The Bear 98.9." They played "9,890 songs in a row!"

John Jefferson sent a KSOR Ashland translator map and translator data from the Metropolitan Opera station list, all of which he and I checked over for discrepancies with my main list. Jim Pizzi sent L.A. station ratings, showing KPWR 105.9 tops, followed by KJIS-FM 102.7, KOST 103.5, and KABC AM, which had been first, in fourth place. Groveling near the bottom are KJLH 102.3, KPMP AM, and KNAC FM 105.5.

Ken Onyschuk rejoined the WTFDA, and for a while he had no VUDs to look at. Carol ran off some photocopies for him of my column. We're glad he's back, and reading this column. Ken Simon sent lists of station news, including word of FL FM pirate activity (see scattered below). "Was in Coral Gables and drove back to West Palm Beach, WJVM '90.5 fades for good at downtown Miami, about 18 km. [Hurting them, Ken, is the fact that they don't have vertical—they're only horizontal polarized—b.e.] In Stuart FL '90.3 translator is as strong as the 89.3 signal from Boynton Beach. Oh yeah, WJOC 102.1 is almost a local here—just what I need. Where are the classical stations?" [I wonder if you don't mean WJIS 88.1 Bradenton?—b.e.]

Ralph Strobel heard on 98.7 by m-s a "K-Rock," and he wonders what station that might be. "What you stated regarding 90.7 WFUV is accurate in last month's FMedia! In the late '70s on m-s on 90.7 brought me, . . . (In the Bronx, New York city, WFUV. . . (on the hour). This was before Lima OH, WGLE, came on the air."

Joe Fela sends more about WEBC 107.9 Wausort, CT being off, saying they were off for about 11 days. Some of the time may have been on with low power, but he was unable to pick them up then. WEGX 106.1 Philly now No. 1 in ratings, with the help of its Eagle 106 mascot or non-ID.

"I think that the way I was quoted in the December VUD makes it unclear what the real problem with the Kenwood RZ-1 really is," writes Larry Weil. "The problem I reported is due to severe overload when anywhere within approximately 16 km of any broadcast transmitter. It is not due to any lack of sensitivity by the receiver, which is what someone reading that quote may have been led to believe. Perhaps you should print a clarification so that no one will be misled." He reported a good ES opening in early November. Larry sent an article on "KBC,"

on the SCA of WOXR-FM 96.3, the Korean Broadcasting Corp., which appeared in the "Daily News."

Northern Essex Community College, Lawrence MA, would like to convert its closed-circuit radio station to over the air radio. Article does not say, but I suspect they are eyeing an FM frequency, probably with Ed Perry's help. He's a consultant who has found several FM channels for student stations in the northeast. Finally, Larry sent a letter to the editor of the Toronto Globe and Mail saying the CBC lacks quality on its FM network, and how they seldom hear complete works by Bach or any other composer on the network. There's "an interminable bland rush of chit chat and jaunty allegro movements that has dominated CBC-FM's programming since 1977. . . After 10 years of increasingly trivial programming, CBC-FM is still reaching only three percent of the population and, more important, is now no longer a serious cultural force. Perhaps the time has come for the new government to examine whether there's any point in continuing to pay \$50-million a year for CBC-FM, when we can hear for free from stations like CFMX in Cobourg or KING-FM in Seattle the quality music programs that CBC-FM was originally set up to provide," writes Jon O'Grady, Vancouver.

Now on to the more "official" stuff, most of which ran last month in FMedia! Some of the below is new this month in the VUD, and look for the feature, "See Also," in which I point out FM news from the pages of last month's VUD.

KY (Hendersonville) Elizabethtown WKNO 106.3 adds Radcliff

#### AM Happenings Most Likely Caused by FM (selected; more are in FMEDIA)

CA Los Angeles KAGZ AM, once No. 1, now fourth place in fall Arbitron. "With KABC's success for occasional telemetry, but "We would like to use it for reading to the blind. . . We are also thinking of going stereo." Format g,

stations have steadily lost ground to the crisper, more popular stereo sound of FM. . . Only five of the top 20 stations in Los Angeles are AM stations, and only two of those—KMPC AM (710) and Spanish-language KTNQ AM (1020) play music."  
CA San Francisco—six major AMs include six simulcast on FM (KSF-FM, KABL-AM-FM, KDFC-AM-FM, KQJ-AM-FM, KBLX-AM-FM, KKKI-AM-FM). "But then FM is tough there." DCWashington. "AM ratings continue to dwindle. In fall Arbitron, AMs scored only 17.1% of the listenership of the top 19 stations, with only four AMs showing up in the top 19. Same four stations scored 18.7% of the top 19 in the summer book."  
HI Honolulu KORI 650 silent  
NY Syracuse 1320 AM. This frequency "has been inactive since Aug. 1, 1965 (the station was WQSR)."  
OH Troy WTRJ 1510 CP forfeited and cancelled. FCC held that the permit was abandoned.  
OR Portland KLVJ 1290 AM. Dave Jack, owner, "shut the station down" and its Elvis Presley format. Future plans indefinite. Station failed to attract either audience or advertisers.  
PA Philadelphia 900 back on, WURD, "The Word," with a black gospel format and new owners. "WFLN never did operate it again. They did fire up the transmitter a few times in December, but ran only an open carrier."  
TN Knoxville WUTK AM 850, formerly WVK AM. Was to have sold for \$1.2 million to a minority enterprise, but deal fell through. Instead, it was given to the U. of TN as a tax write-off of \$800,000.  
VA Richmond WLEE 1480 silent, but being sold to Edward T. Gillar. Part of transmitter site, also shared with "WBBL-1480, sold off, so not known how the church-owned station will fare."  
"Regarding the analogies concerning the antiquity of AM broadcasting (Feb.), I have another obvious incongruity to add—how about those factory AM-only, digitally-tuned car radios? Makes about as much sense as a black and white VCR. Enjoyed the column; keep it up."  
"I enjoy FMEDIA a lot as a listener and observer of FM stereo. On the day that it comes in the end, instead of going to sleep at 10:30, I stay up 'til midnight, reading and digesting all the news. Still interested in the history of FM and FM stereo in Houston, if you are receiving any memorabilia."

"As always, I look forward to FMEDIA as the bright spot of a month's required reading. Besides the speedy reporting of the many changes among stations on the FM dial, the wide variety of views published in FMEDIA are a tribute to the press freedoms enjoyed in this nation, and the spirit of open expression that is not appreciated by nearly enough people these days."

#### Translator Abuse Applications by Noncommercial Licensees (selected)

AK Long Island. Excerpts of comments to the FCC regarding applications by Family Stations, Inc. (primary KEAR \*106.9 San Francisco) by Roderick J. O'Connor, Kodiak AK appeared in FMEDIA last month.  
AZ Flagstaff \*91.3 (WMBI-FM 90.1 Chicago) CA San Francisco, Family Stations (KEAR \*106.9 primary). Broadcast consultant Doug Vernier next steps into the translator track. "I read the write-up in the NFCD newsletter and some of your recent comments on the Family Stations translator applications. Acting on behalf of several of my clients, I have helped prepare a number of petitions to deny against Family applications. In doing so, we have found that all of the applications studied caused interference to another station due to second and third adjacent

and IF relationships. . .

NM Roswell \*89.3, WMBI-FM \*90.1 Chicago—first filed by Moody in an expected long series of such "abusive" applications  
OK Stillwater \*88.7, WMBI-FM  
TX Amarillo \*91.5, WMBI-FM  
TX Bryan \*89.7, KNYD 90.5 Broken Arrow OK  
TX Kerrville \*88.9, KNYD  
TX Laredo \*90.7, KNYD  
TX Longview-Kilgore \*90.5, WYFG 91.1 Gaffney SC  
TX Lufkin \*88.9, KNYD  
TX Midland \*89.1, KNYD  
TX Paris \*89.7, WMBI-FM  
TX San Angelo \*89.3, KNYD  
TX San Antonio (at 6733 Queens Court, West Roberts No. 1) \*88.1, KNYD  
("Windercrest," at 5103 Loop 1604, NW San Antonio) \*88.5, KNYD  
TX Sherman \*89.7, KNYD  
TX Tyler \*88.1, KNYD  
TX Victoria \*90.7, KNYD  
WA Port Orchard ("Dashpoint") \*89.1, KEAR. Petition to deny filed by KPLU \*88.5 Tacoma and KNHC \*89.5 Seattle WA

There may be indication that Family Stations, Inc. and Moody (WMBI-FM \*90.1 Chicago) are connected. I have never seen the two come up against each other in any hearings, or to apply for the same translator frequencies, and except for Kodiak AK (see above) they tend to exist in separate markets. In a recent educational application situation in Bristol-Blountville TN, Moody asked the FCC to accept Family's application as ready to grant. This was after the FCC had returned a competing application filed by Blountville Education Association. The FCC, however, did not grant Family's application, instead reinstating Blountville's application, after new coverage maps and other data were presented to the FCC within a 30 days' grace period of amendments. BEA has since presented information that it has an educational goal, and will work with four area colleges in presenting secular and religious programs which would be locally produced and considered "educational."

"I enjoy your work with every issue. Agree in general on KEAR abuse of rules. I am a broadcaster with FM and translators. . . Keep standing for proper application of FM translator technology and true local service."

# SOUTHERN FM DX

Danny Buntin  
1312 N. Skyline  
Stillwater, OK 74075

DEADLINE: 10th

For FM DX reporters from: AL, AR, AZ, CA, CO, DE, FL, GA, KS, KY, LA, MD, MO, MS, NC, MN, NV, OK, SC, TN, TX, UT, VA & WV. Also DC.

Australis reports Es there has been good. Perhaps that's a favorable sign that North American Es well be good this season. Meteor scatter was active with a couple of other reporters during December. Some Es and tr was also noted during December.

Geoff Wolfe, 40 Charlton St., Mt. Waverley, VIC, Australia 3149

Well, I had much sporadic Es this year, being a record season for me. On one day noting 42 FM Stations via Es. That's a record for Australia. We don't have many stations at all in Australia. Only have 7-8 commercial FM stations in the whole country!

New Caledonia put in some good signals on some frequencies, though not others. TV DX was also good, but that's another story. Elsewhere other DXers had virtually nothing. I had New Zealand FM for 7 days in a row. No sign of South Australia this year. Most of my FM DX is done from Bombala N.S.W. (30 miles from Victorian border). I spend most of my holidays there. 73s.

John Jefferson, 4104 Spyglass Ct., Antioch, CA 94509

Guess I'd better finish off 1988 while I recuperate from a flu bug. There was a major storm here on Dec. 14, just too late to open up the band for the Geminids. Had to settle for a couple new xlaters & some relogs. Too bad: it's the first time since the early '70's that 102.5 has been open, & the first time since 1966 that 106.5 has been relatively blank. It would've been fun at the height of the meteor activity! As it is, I've only managed a couple new ms loggings since moving here: the Perseids were a terrible disappointment; the Geminids did well, but mostly with relogs new to Antioch. Ironically, my 2nd ms catch here was an Antioch relog of an es logging, & was done with the aux tuner w/ rabbit ears!

As usual, new loggings are underlined; @ designates new to Antioch. Dashed underline indicates a new mode, # aux tuner w/ aux antenna in garage, & \$ indicates aux tuner w/ rabbit ears (used when fishing for something in the wrong direction for the aux, which lacks a rotor).

The year-end totals are 238 for Antioch, 978 for the Diablo Area log, and 69 for the year (in the Diablo log). Not too shabby, even if the skip did die the day I moved here. Didn't beat my first-year Pleasanton total (263), but that included May & June. A fairer comparison of sites will be the 12-month totals, and Pleasanton's 267 will get blown away if May & June of this year are anything at all!

Trop on Dec. 21 thru 23rd was intense from parts of AR, MO, MS and west TN. Most high power stations from those areas were 50 db or better. Paid little attention to making relogs as there were so many like all Little Rock, Memphis and areas in between. Jackson, MS also very strong. Directivity of the Probe 9 was evident in logging these stations. I had to really zero in because so many signals were present. Also, I've received that signal on 88.3 again w/\$, but no audio this time, on 1/21. (My only log in '89 so far!) It was only on for a few minutes. At times sounded like someone rubbing their finger on a record needle. It comes from the direction of Summertown, TN. So I wonder if WUTZ is off air since I've never heard them and they may be testing at times. '73 & a fine '89 to all.

Dec 30 - KTEO "...on KTEO..."

Jan 3 - WCTH "...WCTH Catch-FM..."

**Comments:** With all the meteor scatter DXing I've done on 101.1 MHz, one would think that stations to the east of me would also be heard. For some mysterious reason, I seem to be finding the same relogs time and time again. On the evening of December 14, 1988, I counted 14 bursts of classical music on 101.1 from 10-11 p.m. EST. As far as I can tell, WRR in Dallas is the only classical station on this frequency. Many times when I hear WRR by MS, I am able to identify the composition being played over the air. The skies of Dallas, TX must be full of meteor activity compared to other parts of the country. Does anyone have any explanation for this? If so, please write and fill me in. This is interesting.

Here is a list of stations on 101.1 I have never heard by MS or any other type of propagation mode:

WFMH AL Cullman	WGIR NH Manchester
WDDC DC Washington	WPCM NC Burlington
WAFT GA Valdosta	WEAZ PA Philadelphia
WFAL MA Falmouth	WGMH PA Tyrone
KZMT MT Helena	WCKN SC Anderson

In spite of this, out of 27 stations logged on 101.1, 19 have been heard by meteor scatter. My second best frequency for meteor scatter is 98.9 with 18 ID bursts. Total number of stations on 98.9 is 25. Now 98.9 is destroyed by the fact that WBIR Van Wert, OH-Fort Wayne, IN has gone 24 hours! All I needed! Looks as if all the new stations coming on the air will do nothing but destroy our hobby of DXing. Even the television channels are becoming clogged with new stations and TV DXers certainly won't be too happy about that!

Let's hope the spring and summer will bring us all a multitude of Es happiness!  
My meteor scatter total stands idle at 112.

January was above average for any month in a long time in years. With warm temps, stations off, tropes and more listening beat out an average spring month! Still not too shabby for a very modest system and the proximity from NYC! The attic antennas work decently, but I'm planning to get 2 RS 110 mile FM antennas, stack them to use a rotor in the next few months, and plan to get another GE Superradio II. But I don't have \$600.00...yet, for an Onkyo or Carver. Until then.....Good DXing, Bill!

0720 WNYZ returns  
0813 WJZZ 105.9 MI Detroit, MS burst  
0814 WJZZ by Troposcatter

Trops have been interesting in January with warm temps. the 1/16 auroral opening was quite a surprise. Kurt Richardson and I heard CJOM/WJLB. Their audio was difficult to verify due to its raspy sound. The week of Jan 1-7 contained many MS bursts including 2-100. Since I purchased my tuner, I've been receiving WCOD Hyannis, Ma @ 311 miles daily! I even programmed my phone with their request line. I guess I've been blessed with my own personal tropo duct to the Cape! A few days ago, I did my radio promo spring cleaning and came across an FM bandscan from Mt. Washington, N.H. What can be received atop that mountain is incredible! (I'm sure it is. This bandscan sounds very interesting!-gc) Elevation ASL is 6,255 feet. I'll send it in soon. By the way, Greg, your bandscans are great and hope more members send them in! 73's Bill

0814 WESS 90.3 PA East Stroudsburg, relig. music, weak! (1)  
0834 WAIJ 90.3 MD Grantsville, "regional convention to be held at the Washington D.C. Shore Motel." called to verify. Had a feeling it was WAIJ because it sounded like a regional ad, so I called them. The DJ verified it was them, and played back the message I heard over the phone. I've written for verification.

WILLIAM WYLLIE - 95 PECK STREET - FRANKLIN, MASSACHUSETTS 02038-2217

EQUIPMENT: Realistic Modulaire 2200 receiver  
Antenna: Wire connected to the extending rod

## DECEMBER 1988

## 23 Tr

1958 WALK 97.5 NY Patchogue, with Oldies request show.  
ID "WALK-FM" good over WOKW Dover, NH.  
2018 WHAS 94.7 MA Springfield, poor signal, rock music. ID "WHAS"  
2025 WMLN 91.5 MA Milton, good but fuzzy signal, rap music  
Not always heard here.

## 24 Tr

0104 WFCC 107.5 MA Chatham, good but fuzzy. Noted sign off. Very hard to get here due to WAAF 107.3 / WKXS 107.9  
0110 WBSL 107.5 NY New York, Seems to play soft rock (urban oriented?-gc) slogan "Quiet Personal". Strong signal after WFCC sign off. Even good in stereo.  
0116 WCCC 106.9 CT Hartford, very strong. Fuzzy stereo. So strong I almost mistook it for a local. Female DJ's last night on the radio.  
0120 WHCN 105.9 CT Hartford, poor signal, very rare to hear. But did pick out ID as "WHCN" briefly.  
0130 WSPK 104.7 NY Poughkeepsie, rock music. Good signal over WKPE. ID "K-104"  
0137 WBAZ 101.7 NY Southold, strong signal over local WFNK. ID as: "Light of The Bays" something like that. This is only the second time received here.  
0145 WKCI 101.3 CT Hamden, strong signal. Rock music, ID as "KC-101"  
0200 WTYD 100.9 CT New London, Good but fuzzy signal. Tide ID, not heard too often here.  
0208 WEZN 99.9 CT Bridgeport, Easy Rock music, good signal.  
0216 WEVD 97.9 NY New York, big band music. Bing Crosby song. Strong signal Only the second time received here.

This is good reception for December. My receiver is a "REALISTIC MODULAIRE 2200". with a wire connected to the extending rod. Wire goes half way around the room on the edge of the ceiling. It works great. This radio is very good on FM.

**1500 WTNV** 93.5 NY Watertown, r, T-93-FM, legal ID, o/CHRP, Samantha Fox w  
**1532 WPTW** 95.7 OH Piqua, ad, ID, into what sounded like Ohio Buckeyes game. Somehow made it through CFJB-WOLN mess.

## FEBRUARY 1989

**6 TrS**  
**1900 WHOM** 94.9 NH Mount Washington, calls, "The WHOM wx forecast...", lost before end of weather to CKQT/CIMF mix. STATE #36. (Farthest TrS ever at 381 miles.)  
**7 TrS**  
**1452 WFLS** 93.3 VA Fredricksburg, DJ talk, calls, temp (32, I believe) o/WWE/WNHR. Country music heard later on 93.3  
**8 TrS**  
**1952 WVIC** 94.9 MI E.Lansing, ads, legal ID, into R.E.M. song, r, CKQT off

Semi-local CKQT 94.9 Oshawa seems much weaker lately than they have been in the past. I now regularly heard WQMX-UH, WHKS-PA, and CIMF-PQ come in right over them. WHOM Mt. Washington, my farthest TrS ever heard, was also in right over them! As you can see in my report, there has been a few instances of interesting troposcatter in January and February. Otherwise though, conditions have been dead.

**STATION NEWS:** A new station on the air in Western New York is WQRT 98.3 in Salamanca. They are a country station (see Dave Nieman's report). No sign yet of WFBF 89.9 or CJBC 90.3. ANOTHER new station is on in Southern Ontario: CIKX 106.5 Owen Sound. Slogan is K-106.5, format is ad/con-rock mixture (see Morris Sorensen's report). In Chicago, WSEX 92.7 Arlington Heights has changed calls to WCBR, "Chicago's Bear". Format is hits/ad.con mix. In Dallas, ez list. KMEZ 100.3 has moved to 107.5, and KDLZ 107.5 becomes KJNZ 100.3, "Jams 100.3", urban contemporary. In Atlanta, WZGC 92.9 has switched to "Classic Rock", allowing WQXI 94 W to move more in the Top 40 direction. New stations are on in Edmonton, Pa (WHYJ 97.9) and Portage, Mich. (WRKR 107.7) (see Jeff Falconer's report) 97.9 New York City is now WSKQ-Spanish. (See Bob Smolarek's report)

\* I am looking to trade airchecks of stations (a recording of a station), DX Tapes, bumper stickers, and TV Guides with members. I can send you Buffalo, Toronto, and some S. Ontario and Rochester stations, DX Tapes, some stickers, and Buffalo Edition TV Guides.  
 \* Logos courtesy of Joe Fels, Larry Fuss, Bill Kretschmer, and me.

**COMMENTS-** What do you think of bandscan reporting? I am looking for members to answer that question. Bandscans, which run in this column in the late winter-spring months, I feel help to show the membership what can be received at the DXers QTH normally. I have also done and received bandscans from vacation spots as part of a "DXpedition". What do you feel? Do you see you think they are a good idea?

**ON THE NEXT PAGE:** A bandscan by Bill Kretschmer. See what Bill can regularly receive in North Syracuse, New York, site of the 1989 WTFDA convention!, using his Yamaha tuner and Stereo Probe 9 antenna.

BILL KRETSCHEMER - 104 KOPP AVENUE - NORTH SYRACUSE, NEW YORK 13212

March 1989/MARCH 1989/MARCH 1989/MARCH 1989/MARCH 1989/MARCH 1989/MARCH 1989/etc.!!!!

**A LOOK AT WHAT'S NEWS FOLLOWS THE WEATHER:** What a variety! Here in Raleigh we've had some very warm weather. It hit 83 on 2/3, shattering the previous high by 20 degrees. I never heard it officially mentioned but I do believe it was the warmest February day ever! Then there are some portions of the country at that same time that shivered in subzero weather. Greg Coniglio mentions a lack of snow up his way. As of January 19th they were over 35 inches below normal on snow! But as I type this up I see New York is getting its share of lake effect snow. It all balances out in the long run, I guess...now on to the NEWS!

Matt Sittel, NWS News Editor

## JANUARY 1989

6 tr 0850	WXL42	NC Winston-Salem	89	.400	Not too much to report-DX has been
24 tr 0935	KEC84	NC New Bern	104	.400	pretty slow recently. New Bern has been
26 tr 0910	WXL42	NC Winston-Salem	89	.400	heard frequently during those times of
	KHB31	NC Wilmington	116	.550	trops though. Wonder why? Sure could

## FEBRUARY 1989

1 tr 0825	KEC84	NC New Bern	104	.400	use some of those great DX openings
3 tr 0825	KEC95	SC Myrtle Beach	147	.400	from back in August and September. Guess

John Ebeling sent in some information on KEC65, Minneapolis-St. Paul, MN. I've included most of the unique information-as of course all stations say the same things on their information sheets in some cases.

"Station KEC-65 transmitter, with close to 1000 watts of power output, is located on the KSTP TV Antenna near University Avenue and the Minneapolis/St. Paul city limits.

Weather information originates and is recorded on magnetic tape at the Weather Service Forecast Office at the Twin Cities International Airport. These taped transmissions include current conditions and severe weather data, the latest forecasts, 3-day forecasts, weather summaries and advisories, river and climatological data, and hourly weather radar summaries. The material is up-dated routinely as conditions change. During severe weather occurrences, routine programming is replaced by releases concerning the severe weather, which is originally broadcasted live. Such releases consist primarily of watches and/or warnings, special and severe weather statements and safety rules. Civil defense sirens are activated if a tornado or very severe thunderstorm threatens the Twin Cities 7 county Metropolitan Area which includes the following counties of Minnesota: Hennepin, Ramsey, Dakota, Scott, Carver, Anoka, and Washington. The KEC-65 transmitter is equipped with a special feature so that during critical weather situations, such as weather warnings, the Weather Service can transmit a distinctive audible tone alert signal for 3 to 5 seconds. The frequency of the tone is 1050 Hertz (cycles per second). Receivers that can be tone-activated are normally left in a "stand-by" mode. Upon receiving the 1050 Hz warning alarm signal, these receivers are activated so that all transmissions on KEC-65 can be heard. A test of the tone-alert facility is conducted each Wednesday at noon. If a severe weather watch or warning is in progress or appears imminent, this test is cancelled."

Their schedule includes:

ID (FCC required, it says)/24 hours a day(beginning each cycle)  
Weather synopsis/Traveler's Forecast for 5-state area (MN, WI, IA, eastern Dakotas)/24h daily  
Twin City and local extended forecast/24 hours a day  
Twin City Hourly weather conditions and Regional roundup/24h daily  
Minneapolis Weather Radar Summary/24h daily  
Twin Cities Climatological Data/2 to 10 am, 7 to 10 pm

Unscheduled products include:

Severe Weather Watches/Warnings...Safety Rules/Special/Severe Weather Statements/as applicable...routine programming pre-empted

Warning Alarm Test/each Wednesday at noon and the first Wednesday of each month at 1pm.

Thankyou John for the fine information! Also thankyou Greg for the local weather item! And I'll thank me for the DX report since nobody else sent one. Is there any DX out there? Have you been checking? I thought so...well, don't delay! Go check it out, and write me and tell me about your DX or about your local! Help out NWS News!!!!

**OTHER NWS NOTES:** My local NWS WXL-58 in conjunction with its other stations, WXL-50 in Fayetteville and WXL-59 in Rocky Mount, which Raleigh both programs, are conducting a survey about what listeners think of their service. Well, I didn't want to so I...just kidding! Of course I dropped them a postcard and got a survey and some free brochures. You can bet I told them exactly what I think of all their programming!! You know me. Occasionally they mention conditions at home (for Bristol) so I can find out what it is doing at home. WPTF-28 mentions it also! Watch out for that DX-or listen out-and write in to NWS NEWS! 73's and the best DX to YOU!!!!

Fred McCormack  
Box 9077  
Prairieview Station  
 Fargo, ND 58106-9077

Deadline: 04-06-89

John Jefferson, 4104 Spyglass Ct., Antioch CA 94509

PST

Guess I'd better get my report in before it gets too old to print. Since August, things have been fairly quiet - just a couple new LPTV's and a new 5 Meg entry from Bakersfield in the last few months.

11/27/88	gw	1130	K69FB	69	CA	Sacramento TBN
12/ 2/88	tr	2354	K56DZ	56	CA 135	Fresno TBN
1/ 2/89	tr	1728	KDOB	45	CA 240	Bakersfield

Am impressed with KDOB's signal so far. They were as good as KBAK-29 and better than KERO-23, though more prone to fading due to their lower transmitter site. KGET-17 was swamped by land mobile interference, so couldn't be assessed. On occasion, KGET is in like a local, interference notwithstanding; it'll be interesting to see KDOB under those conditions as they are cosited! K56DZ is cosited with K34AV, I'm told by a local ce, so the latter's distance is lowered to 135 on the log. Both are highly variable - K34AV goes from good color with little graininess to nothing - since they're down in the valley, not up in the mountains. K69FB, on the other hand, is a daily occurrence - sometimes usable, sometimes very faint, but always there. Log 76 (Antioch) 155 (Diablo area).

Dave Pomeroy, 1169 Webster, Topeka KS 66604-1502

CST

Not much to report, but a few catches including some December skip on some Louisiana stations I don't see here very often. One new local is K31BW from Manhattan at 45 miles. It is viewable on an indoor UHF antenna in my office at KTWU. I've seen it on the TBN list, but January 30 may have been their first day as they are quite consistent and have never faded. I saw no sign of them in late December when I was in Manhattan, but did see TBN on channel 7. I do not know if channel 7 is still on the air as I have never seen them here. K31BW must be 1000 Watts with the signal they have here. TBN K21AP in Topeka has been off for several days so TBN may have someone in the area activating new stations and doing repair work.

## January 1989

22 gw 1658	W39AF	39	WI	36
	(Grantsburg		WHWC-28)	

No really big opening here on November 2 as in some other parts of North America, but I did, at long last, net my first Canadian trop that morning with a station I've been trying for for several years. With Canada only about 200 miles away, I can't understand why Canadian tropes are so elusive.

WHWC-28's second translator, W39AF, finally made it to the air. I had given up on them. They put out a much better signal than higher powered W57AS in Spooner.

I have just discovered KSTP-5 is going for yet another satellite (of KSAX-42) by applying for 38 in Walker. KARE-11 is also expanding their coverage with translators being built in Bemidji (K52DG), Walker (K36CG), Brainerd (K51CZ), and Wadena (K65EG).

**Bermuda ZFB-FM 94.9** Hamilton, P. O. Box 652. A 1972 qsl report item with letter from Ron E. Evans, Station Manager, with reply back in 1 month. (Holbrook)

**PR WPRM 98.5** Caguas, P. O. Box 487, zip 00625. A 1973 qsl report item with letter from Jesus M. Soto, President, with reply back in 1 month. (Holbrook)

**MN KUHD 89.1** Duluth, University of Minnesota, no zip given. Letter from Joseph P. Zesbaugh (??), Dir. of Eng. letter back 15 days. (Holbrook)

With this month I have used up all of the qsl items that I had on file. I hope I have not missed any items. I did had to drop some for use, because of things missing; like address, call sign & frequency. Just because a station is in a small town, the complete address is needed. The zip plus 4 will not be enough. In my last column I got a little sarcastic to get a point across about the way I do this column. I hope I didn't get too many members mad at me. If you have a list of stations that will not verify any report, send me the list in. Also, send in the way you report your reception for qsl. Bruce Elving says "Most of my follow-ups reception reports, I used postcards this time, and found that technique quite effective." I do have some letter qsl photos that I try to use in future.

# CANADIAN COAST GUARD GARDE CÔTIÈRE CANADIENNE CONTINUOUS MARINE BROADCASTS

by William R. Hepburn

CONTINUOUS MARINE BROADCASTS are made throughout Canadian waters by Transport Canada's Coast Guard Radio Stations. These stations provide continuous 24-hour marine weather and notices to shipping broadcasts.

This listing updates the last CMB list compiled in the Mar. 81 UUD. A number of stations have since been shutdown and removed from nearby stations. Some not so 'nearby' ... for example, the Churchill MB broadcasts are now made from the Thunder Bay ON studio! Overall though, the network continues to expand.

The First CMB outlets went on the air in Ontario back in 1974. A few years later, scheduled broadcasts on 2598 kHz were discontinued in Ontario and the St Lawrence Valley but were retained on the Atlantic Coast. Broadcasts in BC on 1630 kHz were shifted to 2054 kHz. These MF broadcasts are still used by ships outside of VHF range.

Few stations use their call-signs on the air and now tend to identify as "Toronto Coast Guard Radio", etc. The repeater or "peripheral" stations use the same call-sign as the parent station.

The primary CMB frequencies are the maritime channels 21-B (161.65), 83-B (161.775), and 25-B (161.85). On the Pacific coast, the weather channels WX-2 (162.40), WX-3 (162.475), and WX-1 (162.55) are also used despite these being assigned to Environment Canada's Weatheradio Network. In Northern Canada, broadcasts are made on ch. 26-B (161.90) on a scheduled basis only.

Many U.S. Coast Guard stations continue to make scheduled broadcasts on ch. 22-A (157.10). An up-to-date listing will be made soon. The USCG stations however are harder to receive since their broadcasts are not continuous ... typical broadcasts being only 10 minutes in length.

S - scheduled broadcasts only.  
Powers listed are ERP in watts.

COMMENTS: LETS MAKE THIS ROSTER AN ANNUAL VUD FEATURE!!!! THIS WAS PLANNED TO BE READY FOR THE JANUARY ISSUE ORIGINALLY BUT THE MEMBER WHO VOLUNTEERED TO DO IT SAID HE WAS TOO BUSY TO FINISH IT.....THIS BRINGS UP AN IMPORTANT POINT.....IF YOU VOLUNTEER TO DO SOMETHING FOR THE VUD.....DO IT!!!! THE CLUB DEPENDS 100% ON VOLUNTEERS TO COMPLETE PROJECTS AND ARTICLES LIKE THIS ONE.....I WOULD LIKE TO SUGGEST THAT WHOEVER DOES THE NEXT SUCH ROSTER SHOULD HAVE A MAP (MAYBE A VUD COVER!!!!) SHOWING LOCATIONS OF WTFDAERS AND PERHAPS EVEN LISTINGS BY STATE, PROV., CITY, ETC. (JUST LIKE IN VANE JONES) SHOWING WHO AND WHERE THE CLUBMEMBERS ARE.....I DECIDED TO LEAVE OUT OF THIS LIST THE CALL SIGNS THAT APPEAR NEXT TO MANY MEMBERS NAMES ON THEIR MAILING LABELS AS I HAVE NO WAY OF TELLING IN MANY CASES WHAT THEY MEAN.....SOME ARE HAM RADIO/CB CALL SIGNS BUT OTHER ONES ARE APPARENTLY SHORTWAVE LISTENER OR SCANNER MONITOR CALL SIGNS, ITS HARD FOR ME TO TELL THE DIFFERENCE.....THIS LIST IS BASED ON MAILING ADDRESSES OF MEMBERS, SOME MEMBERS HAVING U.S. CITIES AS THEIR ADDRESSES ARE ACTUALLY USING THEM AS MAIL DROPS AND ARE STATIONED OR LIVING OUTSIDE THE CONTINENTAL U.S.....THIS LISTING IS BASED ON CLUB MEMBER VUD MAILINGS AND DOES NOT INCLUDE ADDITIONS AND DELETIONS AND SOME ADDRESS CHANGES MADE FROM 10/88 TO 1/89.....I AM NOT RESPONSIBLE FOR MISPELLING NAMES, BLAME THE COMPUTERS FOR THAT, OKAY?, HI, HI,.....73s, RON S.

## STATION BREAK

WTFDA H.Q.  
P.O. Box 514  
Buffalo, NY 14205-0514

WTFDA member ads only. Items may be edited to conserve space.

FOR SALE - Sansui TU-517 tuner. Will sell because I have a Denon TU-800 on order. Unit in very good shape, has good analog frequency readout, good sensitivity and selectivity, and would offer improvement for anyone using low-moderate price receiver, ghetto blaster, etc. Has a little (AC?) hum. You can't go wrong at \$25 plus shipping!  
Doug Allen - PO Box 5646 - Woodlawn Park CO 80866 - (719) 687-3549

FOR SALE - Magnum FT 101 Dynalab FM tuner and accompanying 12 element Lindsay yagi (they supply the cable business with antennas here in Canada as well as in the U.S.A.)...will be sold to the highest bidder, they are the top of the line and tuner still has three years of guarantee left on it...original price came to around \$700.  
Albert H. Ellis - 19 McClure Ave. - Brantford ONTARIO N3R 4L7 - CANADA - (519) 752-0196

FOR SALE - Foreign-standard TV's for F2 DXing! Many available at local pawn shops due to nearby military bases. Examples: Sharp Linytron DV 262SPN 25 inch 7 system (SECAM, PAL, NTSC systems) w/remote \$299, Toshiba Blackstripe 19 inch 4 system (SECAM, PAL, NTSC 3.58, NTSC 4.43) \$175. We will check out set as best we can, but sold as is! Packing and shipping extra. If you live near military base check local pawn shops!!!  
Doug Allen - PO Box 5646 - Woodlawn Park CO 80866 - (719) 687-3549

FOR SALE - Archerotar #15-001225. In very good shape. Cost \$60 in July '87. Will sell for \$30, shipping included.  
Doug Allen - PO Box 5646 - Woodlawn Park CO 80866 - (719) 687-3549

FOR SALE - Radio Shack VHF/UHF/FM mast-mounted preamp #15-001124. In very good shape. Cost \$35 in July 1987. Will sell for \$18, shipping included. Call or write  
Doug Allen - PO Box 5646 - Woodlawn Park CO 80866 - (719) 687-3549

YOUR non-commercial ad can appear in the VUD free of charge! Got a piece of DX gear you'd like to sell? Looking for something? Advertise in STATION BREAK. This feature appears on a space available basis. WTFDA and the VHF-UHF DIGEST assume no responsibility for any claims made by advertisers--our trust is implicit, as fellow DXers.

FM MAYHEM!!!

## COMING SOON in the V.U.D.

GET READY--SPRING IS BACK.  
IT'S TIME FOR VHF DX TO  
GET STARTED AGAIN!

HELP GET OVER THE ANNUAL  
DX SLUMP WITH A WORD  
PUZZLE FOR VHF/UHF DXERS!
